II. About Kaiser Permanente (KP)

Founded in 1942 to serve employees of Kaiser Industries and opened to the public in 1945, Kaiser Permanente is recognized as one of America’s leading health care providers and nonprofit health plans. We were created to meet the challenge of providing American workers with medical care during the Great Depression and World War II, when most people could not afford to go to a doctor. Since our beginnings, we have been committed to helping shape the future of healthcare. Among the innovations Kaiser Permanente has brought to U.S. health care are:

- Prepaid health plans, which spread the cost to make it more affordable
- A focus on preventing illness and disease as much as on caring for the sick
- An organized, coordinated system that puts as many services as possible under one roof—all connected by an electronic medical record

Kaiser Permanente is an integrated health care delivery system comprised of Kaiser Foundation Hospitals (KFH), Kaiser Foundation Health Plan (KFHP), and physicians in the Permanente Medical Groups. Today we serve more than 12 million members in eight states and the District of Columbia. Our mission is to provide high-quality, affordable health care services and to improve the health of our members and the communities we serve.

Care for members and patients is focused on their Total Health and guided by their personal physicians, specialists, and team of caregivers. Our expert and caring medical teams are empowered and supported by industry-leading technology advances and tools for health promotion, disease prevention, state-of-the-art care delivery, and world-class chronic disease management. Kaiser Permanente is dedicated to care innovations, clinical research, health education, and the support of community health.

III. About Kaiser Permanente Community Health

For more than 70 years, Kaiser Permanente has been dedicated to providing high-quality, affordable health care services and to improving the health of our members and the communities we serve. We believe good health is a fundamental right shared by all and we recognize that good health extends beyond the doctor’s office and the hospital. It begins with healthy environments: fresh fruits and vegetables in neighborhood stores, successful schools, clean air, accessible parks, and safe playgrounds. Good health for the entire community requires equity and social and economic well-being. These are the vital signs of healthy communities.

Better health outcomes begin where health starts, in our communities. Like our approach to medicine, our work in the community takes a prevention-focused, evidence-based approach. We go beyond traditional corporate philanthropy or grant making to pair financial resources with medical research, physician expertise, and clinical practices. Our community health strategy focuses on three areas:

- Ensuring health access by providing individuals served at KP or by our safety net partners with integrated clinical and social services;
- Improving conditions for health and equity by engaging members, communities, and Kaiser Permanente’s workforce and assets; and
- Advancing the future of community health by innovating with technology and social solutions.

For many years, we’ve worked side-by-side with other organizations to address serious public health issues such as obesity, access to care, and violence. And we’ve conducted Community Health Needs
Assessments (CHNAs) to better understand each community’s unique needs and resources. The CHNA process informs our community investments and helps us develop strategies aimed at making long-term, sustainable change—and it allows us to deepen the strong relationships we have with other organizations that are working to improve community health.

IV. Kaiser Foundation Hospitals—Richmond Service Area
   A. Map of facility service area

   B. Geographic description of the community served (towns, counties, and/or zip codes)
   The KFH-Richmond service area includes the major cities and towns of Crockett, El Cerrito, El Sobrante, Hercules, Pinole, Richmond, Rodeo, and San Pablo in Contra Costa County, as well as unincorporated areas covered by the map above.
C. Demographic profile of community served
The KFH-Richmond service area is highly diverse. About 35% of residents have Latinx heritage. More than 20% of residents are Asian, and over 15% of residents are Black. Almost 5% are of multiple races.

V. Purpose of Implementation Strategy
This Implementation Strategy has been prepared in order to comply with federal tax law requirements set forth in Internal Revenue Code section 501(r) requiring hospital facilities owned and operated by an organization described in Code section 501(c)(3) to conduct a CHNA at least once every three years and adopt an implementation strategy to meet the community health needs identified through the CHNA.

This Implementation Strategy is intended to satisfy each of the applicable requirements set forth in final regulations released in December 2014. This Implementation Strategy describes KFH-Richmond’s planned response to the needs identified through the 2019 CHNA process. For information about KFH-Richmond’s 2019 CHNA process and for a copy of the report please visit www.kp.org/chna.

List of Community Health Needs Identified in 2019 CHNA Report
The list below summarizes the health needs identified for the KFH-Richmond service area through the 2019 CHNA process.
1. (Tie) Economic Security
2. (Tie) Health Care Access and Delivery
3. Behavioral Health
4. Housing and Homelessness
5. Community and Family Safety
6. Education and Literacy
7. Healthy Eating/Active Living

VI. Who was involved in the Implementation Strategy development
A. Partner organizations
KFH-Richmond collaborated with partners on both the CHNA and Implementation Strategy processes. Partners include John Muir Health and Contra Costa Health Services.
B. Community engagement strategy

While not required by Federal CHNA regulations, Kaiser Permanente requires all KFH facilities developing Implementation Strategy plans to elicit community input throughout the plan development process. Community member and stakeholder engagement in the implementation strategy development process is intended to enable:

- KFH facilities to develop a deeper understanding of community perspective in developing Implementation Strategies, allowing opportunities for increased collaboration, potential impact, and sustainability
- Opportunities to engage community members beyond organizations and leaders with whom facilities may typically collaborate
- Transparency throughout the implementation strategy development process
- Opportunities to inform community leaders about health system partners’ structures and resources to effectively foster meaningful partnerships.

On August 6, 2019, over 80 partners of KFH-Richmond, KFH-Walnut Creek, KFH-Antioch, Contra Costa Health Services, and other Contra Costa hospital and health system partners gathered at John Muir Health’s Walnut Creek Medical Center.

During the meeting, partners received a brief overview of the CHNA process and how the health needs had been prioritized, as well as highlights from the community concerns that had emerged from focus groups and interviews conducted in 2018. They also learned about specific implementation strategies to achieve outcomes related to each health need, drawn in part from an outcomes menu developed by Kaiser Permanente’s Northern California Region Community Benefit team to guide investments and strategies from 2020-22.

For each priority health need, participants were asked to reflect on three questions:

1. What work is already happening in Contra Costa County to achieve the intended outcomes?
2. How’s it going? What’s working well (e.g., best practices and approaches? What could be improved)?
3. What’s possible to achieve together? What are emerging opportunities, collaborative strategies, collection action, etc. that could contribute to these outcomes in the future?

Participants were divided into eight smaller groups for guided discussions, with a hospital/health system table leader/facilitator and notetaker staffing each group.

The eight groups included:

- Health Care Access and Delivery (2 groups)
- Behavioral Health (2 groups)
- Economic Security (2 groups)
- Housing and Homelessness
- Community and Family Safety

Each group reported highlights from the table discussions to the larger group; notes from each group discussion also were shared with the partners to develop their own Implementation Strategies. Highlights from the discussions most relevant to the KFH-Richmond health needs are provided below.
Access to Care and Coverage. Two groups addressed a range of topics related to access to care, including Medi-Cal outreach, uninsured populations, navigating care, health homes, non-medical social services, and the capacity of community clinics. Participants noted that a great deal of effective work is already in place in Contra Costa among community-based organizations (CBOs) and Federally Qualified Health Centers (FQHCs), including access to promotoras, navigators, and volunteers who help patients find their way to and through complex systems and referral networks. However, some subpopulations and subgeographies within the county remain hard to reach and do not have access to the resources available to others. More infrastructure is needed, along with increased outreach to populations such as those not eligible for insurance or isolated by language and cultural barriers. These concerns are addressed through strategies that increase the capacity of organizations to conduct effective outreach and navigation to connect vulnerable populations to care; capacity support for free clinics and those serving hard-to-reach populations; and increased capacity to screen and refer clients to social, non-medical services.

Behavioral Health. As with the broader Access to Care discussions, participants in these groups noted that significant work is already in place to improve access to behavioral health services, but that more is needed—particularly in terms of outreach to those who need services the most and are least likely to stay engaged and connected with service systems over time. Participants noted that schools are not always engaged with the systems around them and could be conduits for helping people understand and access behavioral health support.

The second behavioral health group focused on Adverse Childhood Experiences (ACEs), trauma (especially within the K-12 system), and resilience. Although the topic areas appear to focus on children, participants noted that trauma needs to be addressed across the lifespan, including helping adults heal from trauma they may have experienced as children. Gaps included finding ways to change systems (e.g., by addressing trauma more comprehensively within and across systems) and especially changing mindsets embedded in structures and systems (e.g., institutional racism) that are perpetuated and reinforced, adversely affecting children of color. Partners also are interested in how technology could advance both practice (via online training) and access (via telehealth options).

These concerns are addressed by strategies that increase access to trauma-informed services and training in school systems and for organizations serving vulnerable populations (such as re-entry, foster care, transition aged youth, and survivors of domestic violence) and support expanded telehealth services.

Economic Security. While some helpful workforce development and job training programs and initiatives are in place, participants in this group discussion found them to be scattered and difficult to access. One suggestion was to organize a more centralized hub for the variety of services related to economic security, including food, housing, financial literacy training, and transportation. To increase access to food in general and healthier foods in particular, participants discussed expanding mobile food and vegetable distribution sites, training all related organizations as entry points for wraparound services, and disseminating more information to employers to build awareness. These concerns are addressed by strategies that support training and employment assistance for those re-entering the workforce and food distribution programs for low-income families and individuals.

Housing and Homelessness. Early reports on implementation of the Coordinated Entry system (which customizes different housing options based on the acuity of needs) are positive, although
again the demand for services and support far exceeds the supply. Participants are concerned about increasing demand for shelters and support as housing prices continue to rise, expressing particular concern about seniors and transition-aged youth graduating from the child welfare system. Flexible and emergency funding were cited as effective solutions that may prevent evictions and homelessness for relatively small amounts of funding. These concerns are addressed with strategies that support outreach, navigation, and case management to connect individuals to Coordinated Entry services, as well as training and employment assistance for people experiencing homelessness.

C. Consultant(s) used

**Cole Communications, Inc.** is a public health planning and communications consulting practice founded by Nicole Lezin in 1999. Cole Communications’ consulting services include qualitative evaluation, strategic planning, writing and editing, and facilitation for public and nonprofit agencies. Over the past 20 years, consulting assignments have covered a wide range of public health topics, including arthritis, Alzheimer’s disease, children’s health and development, reproductive health, immunizations, diabetes, obesity, injury and violence prevention, and oral health, among many others.

Nicole Young is the sole proprietor and principal of **Optimal Solutions Consulting (OSC)**, a management consulting firm based in Santa Cruz County that provides training, coaching, facilitation, and strategic planning to increase organizational effectiveness and systems-level impacts. Cole Communications, Inc. and OSC have served a range of local, state, and national clients including government agencies, First 5 Commissions, educational entities, community foundations, professional associations, and many small and large nonprofits and coalitions in the health, human services, and early education sectors.

**Mesu Strategies, LLC** is a research and strategy firm committed to realizing a just and inclusive society. The firm envisions a strong ecosystem of leaders across industries working to create healthy, equitable and sustainable communities for current and future generations. Mesu Strategies provides strategic guidance and analytical support, as well as coaching, training, and facilitation to community and organizational leaders looking to create and scale up social impacts through policies, systems and organizational change. The firm’s specialties include health equity, racial justice, and resilient equitable development. Located in Oakland, California, Mesu Strategies is a woman- and minority-
VII. Health needs that KFH-Richmond plans to address

A. Process and criteria used

The East Bay Community Health Investment Committee (CHIC), with representation from both KFH-Oakland and KFH-Richmond, met in August 2019 to select priority health needs from those that had emerged through the CHNA process.

Attendees included:

- Continuum Administrator
- Physician-in-Chief, KFH-Oakland
- Physician-in-Chief, KFH-Richmond
- Physician, Internal Medicine, Director Internal Medicine Residency Health Equity and Disparities Track
- Public Affairs Director
- Senior Vice President / Area Manager
- Chief Operating Officer, KFH-Richmond

The group reviewed the results of the CHNA, demographic data, and indicators and community concerns (especially those related to health disparities). The group then used individual worksheets to apply a rating scale (with a score of 3 for high priority, 2 for medium, and 1 for low) to assess each health need in terms of the following criteria:

- **CHNA priority for each health need** (pre-assigned as high, medium, or low)
- **Leveraging community assets** (i.e., whether there are opportunities to collaborate with existing community-wide partnerships, build on current programs or emerging opportunities, or partner with other community assets)
- **Evidence-based or promising approaches** (i.e., whether there are effective, evidence-based or promising strategies to be applied to address the health need)
- **Leveraging KP expertise and/or assets** (i.e., whether East Bay Area hospitals could make a meaningful contribution to addressing the need), and
- **Feasibility** (whether East Bay Area hospitals have the ability to make an impact, given the resources available)

As noted above, in the scoring process, the priorities emerging from the CHNA were pre-scored. The “leveraging KP expertise and/or assets” rating was given double weight compared to the others because it was considered the single most relevant criterion for selecting local strategies to emphasize in the service area. Members engaged in a discussion about where Kaiser Permanente could reasonably expect to have an impact and how (and even whether) feasibility could be determined.

The highest scores from this process yielded Health Care Access and Delivery as the top priority, followed by Behavioral Health and Healthy Eating/Active Living. Economic Security was the fourth priority. These were also the highest-scoring health needs in terms of leveraging Kaiser Permanente
assets and the feasibility of making an impact, given available resources. Housing and Homelessness was the fifth priority, due mainly to lower scores on feasibility of making an impact.

B. Health needs that KFH-Richmond plans to address

To reflect community concerns raised through the CHNA process, the CHIC members agreed to maintain **Health Care Access and Delivery**, **Behavioral Health**, and **Economic Security** as the top three priorities for the East Bay area, embedding components of Healthy Eating/Active Living (particularly food security), Housing and Homelessness, and Education and Literacy (particularly workforce development and job training) into the broader Economic Security health need.

**Health Care Access and Delivery**

Barriers to receiving quality care include lack of availability, high cost, lack of insurance coverage, and lack of cultural competence on the part of providers. Community members discussed these barriers, specifically those related to health insurance access, affordability of care (including deductibles), and the lack of access to specialists, especially for Medi-Cal patients. The health care workforce overall was a topic frequently addressed by professionals, who cited low reimbursement rates for clinicians as an impediment to accepting Medi-Cal patients. Many community members in the KFH-Richmond service area expressed alarm about health care access barriers faced by immigrants who are either ineligible for Medi-Cal due to their immigration status, or fearful of being deported if they should access services for which they are eligible.

Health Care Access and Delivery is an area where KFH-Richmond sees the greatest opportunities to leverage Kaiser Permanente assets, align with needs identified by community members through the CHNA process, and make an impact on the unmet needs for access that have the greatest potential to affect future health outcomes.

**Behavioral Health**

Community members from the service area emphasized depression and stress, as well as the co-occurrence of mental health and substance use. These issues may be partially driven by social isolation. KFH-Richmond community members identified trauma and adverse childhood experiences (ACEs) as other drivers of behavioral health problems.

Similar to Health Care Access and Delivery, the Behavioral Health need received high scores for the potential to leverage Kaiser Permanente assets and for the feasibility of making an impact, particularly in terms of persistent disparities in accessing care and treatment. In particular, the role of ACEs offers opportunities for screening, intervention, and prevention, as well as collaboration with schools and other systems.

**Economic Security**

Community members discussed food insecurity, risk of homelessness, and employment as key factors in economic security. Residents emphasized that while there may be plenty of jobs in the service area, these jobs do not pay enough to cover the high cost of living. Community members described how individuals with lower incomes may have a harder time accessing care, which impacts health outcomes. For example, community members observed that individuals working low-wage jobs
are among those who can least afford to miss work in order to attend to their health. Educational attainment and employment are an important predictor of economic stability. In the KFH-Richmond service area, however, fewer than six in ten adults have any post-secondary education, a proportion significantly lower than the state average of 64%. The proportion of children eligible for free or reduced-price lunch is significantly higher in the KFH-Richmond service area compared to the state average, an indicator of food insecurity.

While the Economic Security health need did not receive the highest scores for leveraging Kaiser Permanente assets, the feasibility of making an impact, or evidence-based and/or promising approaches, each of these criteria has scored higher in this cycle than in previous ones. In part, this is due to the recognition of the connections between economic security and many aspects of the other health needs, such as housing and homelessness, food security, safety, and education and literacy. As a result of these connected issues and the potential to amplify Kaiser Permanente’s contributions through additional regional and national investments, the Economic Security health need was included as a top priority.

VIII. KFH-Richmond’s Implementation Strategies

A. About Kaiser Permanente’s Implementation Strategies

As part of the Kaiser Permanente integrated health system, KFH-Richmond has a long history of working internally with Kaiser Foundation Health Plan, The Permanente Medical Group, and other Kaiser Foundation Hospitals, as well as externally with multiple stakeholders, to identify, develop and implement strategies to address the health needs in the community. These strategies are developed so that they:

- Are available broadly to the public and serve low-income individuals
- Are informed by evidence
- Reduce geographic, financial, or cultural barriers to accessing health services, and if they ceased would result in access problems
- Address federal, state, or local public health priorities
- Leverage or enhance public health department activities
- Advance increased general knowledge through education or research that benefits the public
- Otherwise would not become the responsibility of government or another tax-exempt organization

KFH-Richmond is committed to enhancing its understanding about how best to develop and implement effective strategies to address community health needs and recognizes that good health outcomes cannot be achieved without joint planning and partnerships with community stakeholders and leaders. As such, KFH-Richmond welcomes future opportunities to enhance its strategic plans by relying on and building upon the strong community partnerships it currently has in place.

KFH-Richmond will draw on a broad array of strategies and organizational resources to improve the health of vulnerable populations within our communities, such as grant making, leveraged assets, collaborations and partnerships, as well as several internal KFH programs. The goals, outcomes, strategies, and examples of resources planned are described below for each selected health need.

B. 2019 Implementation Strategies by selected health need
**Health need #1: Access to care**

<table>
<thead>
<tr>
<th>Long term goal</th>
<th>All community members have access to high quality, culturally and linguistically appropriate health care services in coordinated delivery systems</th>
</tr>
</thead>
<tbody>
<tr>
<td>Intermediate goal(s)</td>
<td></td>
</tr>
</tbody>
</table>
  - Increase access to comprehensive health care coverage for low income individuals  
  - Increase access to subsidized care for those facing financial barriers to health care  
  - Increase access to social non-medical services for low income and vulnerable populations  
  - Increase access to a diverse, culturally competent health care workforce  
  - Improve the capacity of health care systems to provide quality health care services |

| Strategies |  
  - Increase capacity of organizations to conduct effective outreach and navigation to vulnerable populations to connect them to care  
  - Increase FQHC and health system capacity to screen and refer clients to social, non-medical services (e.g., food, housing, employment)  
  - Support training/recruitment of community health workers (e.g., promotoras); Parent Ambassadors  
  - Support training/recruitment of health and social system navigators  
  - Support outreach and enrollment campaigns to increase CalFresh enrollment for eligible community members (Food for Life)  
  - Support screening for social non-medical service needs and connect low-income individuals and families to community and government resources (Thrive Local)  
  - Support population health management approaches that improve health outcomes for safety net patients with diabetes and hypertension (PHASE)  
  - Support community clinic consortia to develop programs and advocate for policies that improve access to quality health care for low income individuals  
  - Participate in Medi-Cal Managed care  
  - Provide Charitable Health Coverage  
  - Provide Medical Financial Assistance  
  - Provide workforce training programs to train current and future health care providers, including physicians, mental health practitioners, physical therapy, pharmacy, nurses, and allied health professionals, with the skills and linguistic and cultural competence to meet the health care needs of diverse communities  
  - Implement health care workforce pipeline programs to introduce diverse, underrepresented school age youth and college students to health careers (KP LAUNCH)  
  - School for Allied Health expanding access to training and certificate programs for underrepresented individuals |
<table>
<thead>
<tr>
<th>Expected outcomes</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Increased outreach to vulnerable populations that helps them access comprehensive health care coverage</td>
</tr>
<tr>
<td>• Increased outreach to vulnerable populations that helps them navigate and connect to subsidized care</td>
</tr>
<tr>
<td>• Reduced financial barriers to care by increasing access to Medical Financial Assistance</td>
</tr>
<tr>
<td>• Increased access to trained navigators and community health workers that connect low-income and vulnerable populations to social non-medical services</td>
</tr>
<tr>
<td>• Increased opportunities for diverse, culturally competent workers to enter the health care workforce</td>
</tr>
</tbody>
</table>

**Health need #2: Behavioral Health**

<table>
<thead>
<tr>
<th>Long term goal</th>
<th>All community members experience social emotional health and wellbeing and have access to high quality behavioral health care services when needed</th>
</tr>
</thead>
<tbody>
<tr>
<td>Intermediate goal(s)</td>
<td>• Increase capacity of organizations and institutions to provide trauma-informed services and programs</td>
</tr>
<tr>
<td></td>
<td>• Increase access to behavioral health care services for low-income and vulnerable populations</td>
</tr>
<tr>
<td></td>
<td>• Develop a diverse, well-trained behavioral health care workforce that provides culturally competent care</td>
</tr>
</tbody>
</table>

| Strategies | • Support trauma-informed services and training for organizations serving vulnerable populations (re-entry, immigrant, foster care, transition age youth, domestic violence survivors, homeless) |
| | • Support FQHC capacity to screen and connect patients to mental health services |
| | • Support telehealth options to increase access to behavioral health services by reducing transportation and stigma barriers |
| | • Support programs providing direct mental health services in schools (MOU required) |
| | • Support the capacity of clinics, schools or other community-based organizations to provide trauma-informed care to youth |
| | • Implement the Public Good Projects’ Action Minded campaign, a digital community health intervention using education, social engagement and multi-media tools to engage the general public, issue-advocates and community partners, and KP employees as partners in reducing stigma towards mental health conditions |
| | • Provide KP’s Education Theater program, Resilience Squad |
| | • KP Behavioral Health Training program |
### Expected outcomes
- Increased scope and availability of trauma-informed services and programs available through programs serving vulnerable populations
- Increased screening and referrals to behavioral health care services for low-income and vulnerable populations, especially youth (in settings such as FQHCs and schools)
- Increased access for vulnerable populations to a diverse, well-trained behavioral health care workforce that provides culturally competent care
- Increased help-seeking for behavioral health issues prompted by stigma reduction campaigns

### Health need #3: Economic Security

<table>
<thead>
<tr>
<th>Long term goal</th>
<th>All community members are economically secure in order to thrive</th>
</tr>
</thead>
</table>
| Intermediate goal(s) | - Improve economic vitality of local and diverse businesses  
- Increase in enrollment and participation in public benefit programs  
- Improve job readiness for people with barriers to employment  
- Increase connections to supportive services for individuals experiencing homelessness  
- Reduce food insecurity among low-income families and individuals |

| Strategies | - Provide support for programs that offer basic skills and other training and employment assistance to vulnerable populations (re-entry, immigrant, domestic violence survivors, homeless population)  
- Support outreach, navigation, and case management that connects individuals to coordinated entry services  
- Support food distribution programs that partner with school districts, health systems and community partners (e.g., immigration, housing) to provide nutritious foods to people who experience food insecurity  
- Funding to strengthen local homeless system of care through the Housing and Health Initiative  
- Implement Community Solutions’ Built for Zero to address chronic and veteran homelessness  
- Increase baseline spend for local and diverse businesses |

| Expected outcomes | - Increased use of local and diverse businesses as suppliers  
- Increased enrollment and participation in public benefit programs (e.g., CalFresh)  
- Improved job readiness for people with barriers to employment (especially due to re-entry, domestic violence, immigration status, homelessness) |
Increased connections to supportive services (e.g., Coordinated Entry) for individuals experiencing homelessness

Reduced food insecurity among low-income families and individuals through access to nutritious foods via school, health, and community partner settings

C. Our commitment to Community Health

At Kaiser Permanente, our scale and permanence in communities mean we have the resources and relationships to make a real impact, and wherever possible, our regions and facilities collaborate with each other and with key institutions in our communities, such as schools, health departments, and city/county governments to create greater impact. The CHNA/IS process also presents the opportunity to reinforce and scale national strategies to address health needs that impact all of our communities, even if those health needs are not prioritized locally. The following strategies illustrate the types of organizational business practices we implement to address health needs and contribute to community health and well-being:

- **Reduce our negative environmental impacts and contribute to health at every opportunity.** We have optimized the ways in which we manage our buildings; purchase food, medical supplies and equipment; serve our members; consume energy; and process waste. The following strategies illustrate several of our practices that enable us to operate effectively while creating a healthier environment for everyone. Our Environmentally Preferable Purchasing Standard prioritizes the procurement of products with fewer chemicals of concern and less resource intensity, thus encouraging suppliers to increase the availability of healthier products. We are building renewable energy programs into our operations, with plans to be carbon neutral in 2020. We recognize that mitigating the impacts of climate change and pollution is a collective effort, and we are therefore proud to work with like-minded organizations and individuals, including the United Nations, Health Care Without Harm, government entities, as well as other influencers that advocate for environmental stewardship in the healthcare industry and beyond.

- **Deploy research expertise to conduct, publish, and disseminate epidemiological and health services research.** Conducting high-quality health research and disseminating its findings increases awareness of the changing health needs of diverse communities, addresses health disparities, and improves effective health care delivery and health outcomes in diverse populations disproportionately impacted by health disparities. Research projects encompass epidemiologic and health services studies as well as clinical trials and program evaluations. They cover a wide range of topics including cardiovascular disease, cancer, diabetes, substance abuse, mental health, maternal and child health, women's health, health care delivery, health care disparities, pharmaco-epidemiology, and studies of the impact of changing health care policy and practice.

- **Implement healthy food policies to address obesity/overweight,** such as purchasing sustainable, locally produced fruits and vegetables; supporting local restaurants and caterers that meet KP’s Healthy Picks and to make more available healthier food options in our communities; and supporting vendors that hire under/unemployed residents (with living wages...
and benefits) in the food production/distribution process. We also partner with school districts and city governments to support them in adopting and implementing healthy food procurement policies.

- **Contribute toward workforce development, supplier diversity, and affordable housing to address economic security.** We support supplier diversity by implementing policies and standards to procure supplies and services from a diverse set of providers; working with vendors to support sub-contracting with diverse suppliers; partnering with community-based workforce development programs to support a pipeline for diverse suppliers; and building the capacity of local small businesses through training on business fundamentals. We also seek to reduce homelessness and increase the supply of affordable housing by strengthening systems to end homelessness and shaping policies to preserve and stimulate the supply of affordable housing.

**IX. Evaluation plans**

Kaiser Permanente has a comprehensive measurement strategy for Community Health. Our vision at Kaiser Permanente is for our communities to be the healthiest in the nation. To that end, we are committed to pursuing a deep and rigorous understanding of the impact of our community health efforts. We monitor the health status of our communities and track the impact of our many initiatives on an ongoing basis. And we use our measurement and evaluation data, and information gathered through our CHNAs, to improve the effectiveness of our work and demonstrate our impact. The CHNAs can help inform our comprehensive community health strategy and can help highlight areas where a particular focus is needed and support discussions about strategies aimed at addressing those health needs.

In addition, KFH-Richmond will monitor and evaluate the strategies listed above for the purpose of tracking the implementation and documenting the impact of those strategies in addressing selected CHNA health needs. Tracking metrics for each prioritized health need include the number of grants made, the number of dollars spent, the number of people reached/served, collaborations and partnerships, and metrics specific to KFH leveraged assets. In addition, KFH-Richmond tracks outcomes, including behavior and health outcomes, as appropriate and where available.

**X. Health needs KFH-Richmond does not intend to address**

**Healthy Eating / Active Living.** The Healthy Eating / Active Living health need received high scores from CHIC members, but was a lower priority in the CHNA process. In addition, CHIC members noted that significant investments had already been made. The group agreed to incorporate one element of this health need—food security—into the Economic Security emphasis.

**Housing and Homelessness.** Housing and Homelessness was ranked in the middle of the health needs by the CHIC members. This health need received lower scores than most of the other health needs (except Transportation / Traffic and Climate / Natural Environment) in terms of leveraging community assets and was also in a lowest tier in terms of the feasibility of Kaiser Permanente having an impact. Recognizing the link between Economic Security and Housing and Homelessness, this health need was incorporated into the Economic Security priority health need and is also being addressed by national strategies in the KFH-Oakland service area.
**Education and Literacy.** This health need was rated as a medium priority in the CHNA and received similar rankings in the CHIC process. Relative to other health needs, it received lower rankings for the ability to leverage Kaiser Permanente expertise or organizational assets, and for the feasibility of making an impact. However, the CHIC members selected elements of Education and Literacy—notably job training and workforce development—in the Economic Security health need, as well as mental health and wellness for school-aged children under Behavioral Health.

**Community and Family Safety.** This health need received relatively low rankings from CHIC members for the availability of evidence-based or promising approaches, the ability to leverage Kaiser Permanente expertise or assets, and the feasibility of making an impact. However, some elements of Community and Family Safety are specifically addressed by strategies included in the priority health needs—particularly addressing trauma through the education and behavioral health systems, helping people navigate and access health and non-medical social services (including survivors of domestic violence and human trafficking), and supporting interventions that increase economic security and reduce homelessness (such as providing specialized educational and behavioral health services designed for those experiencing re-entry or homelessness.)
