It's not what AI does with Kaiser Permanente. It's what Kaiser Permanente does with AI.

Jennifer A. Tarin, MD
SVP, Deputy Chief Medical Officer, Kaiser Permanente

AI doesn't make medical decisions – our doctors and care teams do.
Artificial intelligence isn't here to replace the clinical judgment of our health care professionals. Instead, it serves as a powerful tool to help them provide empathetic and high-quality care for our members.

500 lives saved per year

AI guided systems detect sepsis earlier, before it becomes a crisis.

60% reduction in MRI wait times

An FDA cleared AI tool accelerates imaging and diagnosis.

Earlier cancer detection

Breast cancer risk is identified years before traditional screening, when treatment is most effective.

Largest-ever cardiac AI model

Built by Kaiser Permanente researchers for faster, more accurate diagnosis of heart attacks and failures.

Our commitment

Our clinicians and Kaiser Permanente want the same thing: **technology that serves patients, protects clinical judgment,** and makes this the best place in the country to receive and deliver care.

Setting an industry standard

According to a recent MIT study, Kaiser Permanente produced the first comprehensive worker-voice AI agreement in American health care through collective bargaining, ensuring our care providers help shape the design, implementation, and use of AI technologies.
